

# INSTALLATION, OPERATION, AND SERVICE MANUAL

NOBLE UH30-FND NOBLE UL30 NOBLE UL30H

# **REVISION HISTORY**

Revision Letter	Revision Date	Made by	Applicable ECNs	Details
А	7-18-16	JH	N/A	Initial release of the manual.
В	3-7-17	JH	N/A	Added UL30 and UL30H units. Updated pg. 43 with new motor and assembly P/Ns.
С	5-17-17	JH	8511	Updated water line connection information. Changed wording in the chemical feeder pump programming section to indicate changes are lost if closed without saving. Changed the steps in the Heater Contactor Wiring and Shutdown & Cleaning sections to be applicable to units with a mechanical timer. Removed item #25 from pg. 48. Changed Discharge Hose to 05700-004-43-76 in the Wash Manifold Assembly. Added 05700-004-36-95 to UH30-FND Display page and corrected the P/N for the Display Decal. Added a Plumbing Options page.
D	6-6-17	JH	N/A	Corrected draining procedure. Corrected wash motor amps for UL30/UL30H on Electrical Requirements page. Updated the UL30/UL30H schematic. Removed the UH30-FND from the manual.
Е	8-23-17	JH	QOF-386	Added the 100" chemical tubes for red, white, and blue to Chemical Feeder Pump Assembly page.
F	10-17-17	JH	N/A	Added the UH30-FND to the manual.
G	2-19-19	JH	8585 8599	Updated pg. 2. Corrected references to flow pressure on pg. 6. Updated references to E and F outputs on pgs. 9-10. Corrected part numbers of motor assembly and motor only on pg. 42. Updated parts on pg. 44. Changed item #11 on pg. 48. Updated item #6 on pg. 52 and added link to instructions. Added links to instructions on pg. 53.

#### **UH30-FND**

Undercounter dishmachine; high-temperature, hot-water sanitizing, with a booster tank and detergent and rinse-aid chemical feeder pumps.

#### **UL30**

Undercounter dishmachine; low-temperature, chemicalsanitizing, with detergent, rinse-aid, and sanitizer chemical feeder pumps.

#### UL30H

Undercounter dishmachine; low-temperature with wash tank heater, chemical-sanitizing, with detergent, rinse-aid, and sanitizer chemical feeder pumps.

The manufacturer provides technical support for all of the machines detailed in this manual. We strongly recommend that you refer to this manual before making a call to our technical support staff. Please have this manual open when you call so that our staff can refer you, if necessary, to the proper page. Technical support is not available on holidays.

Contact technical support toll free at 1-888-800-5672.

Technical support is available for service personnel only.

NOTICE Connect drain line to MIN 1 1/2" Drain with Air-gap.

Minimum Chlorine Required (PPM) N/A 50

#### **SPECIFICATIONS**

## **ELECTRICAL REQUIREMENTS**

All electrical ratings provided in this manual are for reference only. Always refer to the machine data plate to get exact electrical information for this machine. All electrical work performed on machines should be done in accordance with applicable local, state, territorial, and national codes. Work should only be performed by qualified electricians and authorized service agents.

Note that all electrical wiring used in this series of machines must be rated, at a minimum, for 212 °F (100 °C), and that only copper conductors must be used.

Where applicable, heating element amperage draws have been adjusted for the assumed input voltage. The manufacturer assumes incoming voltages will be either 208 or 230 V. Some heating elements used in the machines are rated for other voltages, such as 240 V and 480 V. Always verify the amperage draw of the machine in operation when sizing circuit protection.

If the dishmachine is equipped with the optional rinse heater, note the rinse heater might have its own electrical connection and require a separate service. Amperage loads for motors and heaters are indicated on the machine data plate.

The electrical configurations of this series of machines are as follows:

#### **Available Electrical Characteristics:**

#### **UH30-FND**

- 208 V, 60 Hz, Single-phase
- 230 V, 60 Hz, Single-phase

#### **UL30/UL30H**

• 115 V, 60 Hz, Single-phase

#### **Available Wash Tank Heaters:**

1.5 kW (UL30H Only)

\*The UL30H is designed so that the wash motor is never running when the wash heater is on. Total Load is based on the higher of the two loads.

# Electrical Characteristics UH30-FND

VOLTS	208	230
PHASE	1	1
FREQ	60	60
WASH MOTOR AMPS	5.0 A	5.0 A

WASH MOTOR AMPS	10.0 A
WASH HEATER AMPS	13.1 A
TOTAL LOAD	13.1 A*

#### INSPECTION

Do not throw away container if damage is evident!

Before installing the unit, check packaging and machine for damage. Damaged packaging might be an indication of damage to the machine. If there is any type of damage to both packaging and unit, do not throw away the packaging. The dishmachine has been inspected at the factory before shipping and is expected to arrive in new, undamaged condition. However, rough handling by carriers or others might result in damage to the unit while in transit. If this occurs, do not return the unit to the manufacturer. Instead, contact the carrier and ask them to send a representative to the site to inspect the damage and request that an inspection report be completed.

Contact the carrier within 48 hours of receiving the machine as well as the dealer that sold you the unit.

**UNPACKING** Remove the box and machine from the pallet before installing. Open the front door and remove all of the materials from inside. Once unpacked, verify there are no missing parts (reference the Parts section). If a part is missing, contact the manufacturer immediately.

The plumber must flush the incoming water line!

PLUMBING All plumbing connections must be made to adhere to local, state, territorial, and national codes. The installing plumber is responsible for ensuring the incoming water lines are flushed of debris before connecting to the machine. Note that chips and materials from cutting processes can become lodged in the solenoid valves and prevent them from opening or closing. Any valves that are found to be fouled or defective because of foreign matter left in the water line, and any subsequent damage, are not the responsibility of the manufacturer.

#### A water hardness test must be performed.

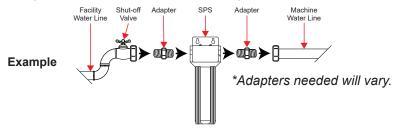

A water hardness test must be performed. A hardness test kit can be found on the warning tag that is attached to the incoming plumbing connection on the back of the machine. If water hardness is higher than 3 GPG, install a water softener or install the optional Scale Prevention System (SPS). See the Plumbing Options page and the next section for more information on the SPS.

See the Machine Dimensions page and reference item "B" for water inlet connection location.

NOTICE The manufacturer does NOT endorse "Tankless On-demand" water heaters for use with their dishmachines. The manufacturer DOES endorse, and highly recommends, the standard "Tank" style water heaters, sized to properly handle the water heating requirements of the facility.

#### WATER SUPPLY **CONNECTIONS:** WATER HARDNESS **HIGHER THAN 3 GPG**

A water hardness test must be performed. There is a hardness test kit on the warning tag attached to the incoming plumbing connection on the back of the machine. If water hardness is higher than 3 GPG and a water softener is not being used, install an SPS (see Plumbing Options page) into the water line between the facility water line and the machine water line (installed at the factory). Observe proper inlet/outlet water directions. A water shut-off valve should be installed before installing the SPS to allow access for service. The water supply must be capable of a minimum of 20 ± 5 PSI "flow" pressure at the recommended temperature indicated on the data plate.

# **CONNECTIONS:**

WATER SUPPLY If water hardness tests at 3 GPG or lower, connect the machine water line (installed at the factory) to the facility water line. A water shut-off valve should be installed in the water line between the facility supply and the machine to allow access for service. WATER HARDNESS The water supply line must be capable of a minimum of 20 ± 5 PSI "flow" pressure at **LOWER THAN 3 GPG** the recommended temperature indicated on the data plate.

# REGULATOR

Take care not to confuse static pressure with flow pressure!

PRESSURE The manufacturer has an optional water pressure regulator to accommodate areas where water pressure fluctuates or is higher than the recommended pressure. Take care not to confuse static pressure with flow pressure; static pressure is line pressure in a "no flow" condition (all valves and services are closed); flow pressure is the pressure in the fill line when the valve is opened during the cycle. See the Plumbing Options page.

SHOCK ABSORBER It is suggested that a shock absorber (not supplied) be installed on the incoming water line. This prevents water hammer (hydraulic shock)—induced by the solenoid valve as it operates—from causing damage to the equipment. See the Plumbing Options page.

#### CONNECTING THE **DRAIN LINE**

The dishmachine has a pumped (pressure) drain capable of pumping waste water to a height of 24" above the floor to the kitchen's drain system. Each dishmachine is supplied with a drain hose. When installed, it will extend from the rear of the machine. There must be an air-gap between the machine drain line and the floor sink or drain. If a grease trap is required by code, it should have a flow capacity of 12 GPM.

PLUMBING CHECK After installing the incoming fill line and the drain line, slowly turn on the water supply to the machine. Check for any leaks and repair as required. All leaks must be repaired before operating the machine.

#### **ELECTRICAL POWER** CONNECTIONS

Electrical and grounding conductors must comply with the applicable portions of the National Electric Code ANSI/NFPA 70 (latest edition) and/or other electrical codes.

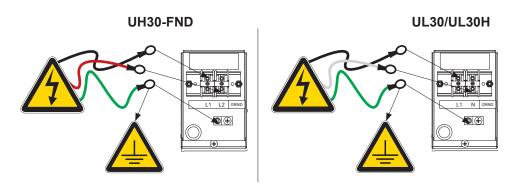

Disconnect electrical power at the breaker or disconnect switch and tag-out in accordance with procedures and codes.

The data plate is located at the left-front side of the dishmachine. Refer to the data plate for machine operating requirements, machine voltage, total amperage, and serial number.

Remove the back panel and set aside. This will require removing the screw at the bottom of the back panel with a phillips screwdriver. Install 3/4" conduit into the prepunched holes in the back of the control box. Route power wires and connect to power block and grounding lug. Install the service wires (L1 and L2 for UH30-FND, L1 and N for UL30/UL30H) to the appropriate terminals as they are marked on the terminal block. Install the grounding wire into the lug provided. It is recommended that "DE-OX" or another similar anti-oxidation agent be used on all power connections.

VOLTAGE CHECK Ensure that the "ON/OFF" switch is in the "OFF" position and apply power to dishmachine. Check the incoming power at the terminal block and ensure it corresponds with the voltage listed on the data plate. If not, contact a qualified service agency to examine the problem. Do not run dishmachine if voltage is too high or too low. Shut-off the service breaker and advise all proper personnel of the location of the breaker and any problems. Replace the control box cover and tighten-down the screws.

#### SURROUNDING AREA

This is a commercial dishmachine and reaches temperatures that can exceed those generated by a residential machine. Surrounding countertops, cabinets, flooring material, and subfloor material must be designed and/or selected with these higher temperatures in mind.

NOTICE Any damage to surrounding area that is caused by heat and/or moisture to materials that are not recommended for higher temperatures will not be covered under warranty or by the manufacturer.

**THERMOSTATS** The thermostats on this dishmachine have been set at the factory. They should only be adjusted by an authorized service agent.

# CHEMICAL FEEDER EQUIPMENT

**CAUTION!** Chlorine-based sanitizers can be detrimental to this machine if the chemical solution is too strong. See a chemical professional to ensure the dispenser is set-up correctly.

The bottom of the chemical container cannot be located any higher than 8" from the floor. If the unit is equipped with the 6" or 18" table stand, the highest position will be 14" or 26" from the floor, respectively. It is important to remember that if you decide to operate the unit in chemical-sanitizing mode, you must ensure an appropriate chlorine-based sanitizer is used in the final rinse line.

#### PREPARING CHEMICAL FEEDER PUMPS

PREPARING The UH30-FND dishmachine is supplied with detergent and rinse-aid chemical feeder pumps.

The UL30 and UL30H dishmachines are supplied with detergent, rinse-aid, and sanitizer chemical feeder pumps.

Locate the open ends of the chemical tubes with the tube stiffeners and place each one in the appropriate container.

- A. Red Tubing = Detergent
- B. Blue Tubing = Rinse-Aid
- C. White Tubing = Sanitizer

# PRIMING CHEMICAL FEEDER PUMPS

WARNING! Some of the chemicals used in dishwashing might cause chemical burns if they come in contact with skin. Wear protective gear when handling these chemicals. If any contact with skin occurs, immediately follow the treatment instructions provided with the chemicals.

Chemical feeder pumps need priming when the machine is first installed or if the chemical lines were removed and air was allowed to enter.

**CAUTION!** Water must be in the sump and wash tank before chemicals are dispensed.

- 1. Verify that the proper chemical tube stiffener inlet is in the proper container.
- 2. Use the prime switches located on the control panel at the bottom of the unit to prime each pump. The switches are clearly marked, "D" for detergent and "R" for Rinse-aid.
- 3. To prime the pumps:

#### UH30-FND

• Detergent - hold the "D" switch in the momentary position until detergent is seen entering the wash tank.

Rinse-aid - hold the "R" switch in the momentary position for one minute.

#### PRIMING CHEMICAL FEEDER PUMPS

#### **UL30/UL30H**

Detergent, Rinse-aid, and Sanitizer - hold each priming switch until the respective chemical can be seen entering the wash tank.

- 4. Detergent is dispensed as required during the wash cycle by the timer. The amount of detergent might need to be increased or decreased depending upon water quality and type of detergent.
- 5. Rinse-aid is dispensed as required into the final rinse. The amount of rinse-aid might need to be adjusted depending upon water hardness and results.
- 6. Sanitizer is dispensed proportionally into the final rinse water line. The amount of sanitizer might need to be adjusted depending on concentration.
- 7. Please refer to the instructions below on adjusting the chemical feeder pumps on the universal timer.

# **CHEMICAL** FEEDER PUMPS

PROGRAMMING To access the programming mode, the machine must be ON and idle (between cycles).

> On the timer board, press and hold both the MOVE and ENTER buttons on the timer board simultaneously for two seconds.

The PROGRAM (PGM) light and light A will illuminate.

**NOTICE** Once in the programming mode, the MOVE button is used to scroll between the programming categories and the ENTER button is used to select the category.

> Press the MOVE button to move the solid light to the desired location of FILL, RINSE AID, DETERGENT, or SANITIZER. Please note that options A, B, C, and D are not adjustable outputs (E and F are also not adjustable on the UH30-FND).

> Press the ENTER button for the chosen category. Now, the (PGM) light will illuminate along with lights corresponding to the time values for the chosen category. The ACCEPT light will blink.

The PROGRAM light will illuminate.

# **CHEMICAL** FEEDER PUMPS

PROGRAMMING To change the value of a parameter, use the MOVE button to illuminate the light next to the time option (time is measured in seconds). In the time categories, each second in use will light up. To deselect the option, press ENTER and the light will go off, press ENTER again and it will illuminate. Once you have set your time category, press the MOVE button until the ACCEPT light illuminates and press ENTER. This will save the changed parameters and exit the programming mode.

> To change any other values, you will have to return to the programming mode. To revert back to a previous setting, you must return to that option and change the parameter back to the previous setting.

> Once in the programming mode, if there have been no keypad inputs for approximately two minutes, the system will automatically exit out of the programming mode. Any changes to parameters will be lost when the programming mode is automatically exited.

The wash and drain cycles are not adjustable.

All time adjustments are in seconds. Refer to the chart below for adjustable outputs.

PGM	UH30-FND	UL30/UL30H
E	Not adjustable	Rinse-Aid
F	Not adjustable	Fill
G	Detergent	Sanitizer
Н	Rinse-Aid	Detergent

#### TIMER PROGRAMMING BOARD

PGM		TIME IN SECONDS
Α		8
В		4
C		2
D		1
Е		0.8
F		0.4
G		0.2
Н		0.1
ACCEPT		
	MOVE	
	ENTER	

**LEVELING** The dishmachine is designed to operate while level. This is important to prevent any damage to the machine during operation and to ensure the best possible results. The unit comes equipped with adjustable bullet feet which can be turned using a pair of pliers. Since this machine is an undercounter unit, it should be leveled as close as possible to the unit's location before it is pushed under the counter.

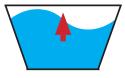

#### **HEATER CONTACTOR** 1. Flip the "ON/OFF" switch to "ON." **WIRES** (UH30-FND ONLY)

Heater contactor wires must NOT be connected before water fills the unit the first time!

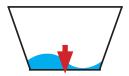

2. Listen for the water to stop filling.

3. Flip the "ON/OFF" switch to "OFF."

4. Listen for the water to stop draining.

5. Flip the "ON/OFF" switch back to "ON."

- 6. Listen for the water to stop filling.
- 7. Flip the "ON/OFF" switch back to "OFF."
- 8. Listen for the water to stop draining.
- 9. Flip the "ON/OFF" switch back to "ON."
- 10. Listen for the water to stop filling. This time the water should begin to splash into the cavity of the machine.
- 11. Once you hear water splashing, flip the "ON/OFF" switch back to "OFF."
- 12. Listen for the water to stop draining.

#### HEATER CONTACTOR WIRES (UH30-FND ONLY)

HEATER CONTACTOR

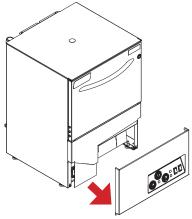

13. Disconnect electrical power at the breaker or disconnect switch and tag-out in accordance with procedures and codes.

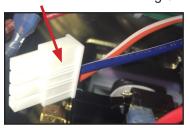

4

Disconnect electrical power at the breaker or disconnect switch and tag-out in accordance with procedures and codes.

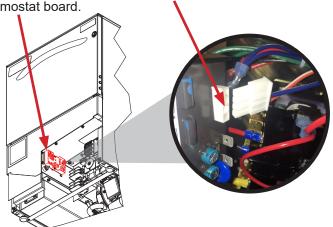

14. Remove the front panel of the machine.

15. Locate the loose connector with the orange/white and blue/black wires.

16. Plug the loose connector into the empty connector on the Right side of the ELAN thermostat board.

- 17. Replace the front panel of the machine.
- 18. Reconnect electrical power at the breaker or disconnect switch in accordance with procedures and codes.
- 19. The machine is now ready for operation.

## **PREPARATION** Before operating the unit, verify the following:

1. Strainer is in place and clean.

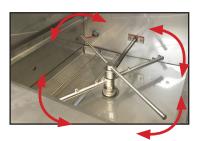

2. Wash and rinse arms are screwed securely into place and end-caps are tight.

3. Wash and rinse arms rotate freely.

4. Chemical levels in chemical containers are correct.

# FILLING THE 1. Close the door.

- WASH TUB 2. Flip the "ON/OFF" switch to the "ON" position.

(UH30-FND Controls Shown.)

- 3. The unit will automatically begin to fill.
- 4. Once the wash tub is filled, wait for five minutes.
- 5. Flip the "ON/OFF" switch to the "OFF" position and wait for unit to drain.
- Flip the "ON/OFF" switch to the "ON" position and wait for unit to fill.
- 7. Ensure wash temperature is at least 150 °F before operating the unit.

#### WARE **PREPARATION**

Proper preparation of ware will help ensure good results and fewer re-washes. If not done properly, ware might not come out clean and the efficiency of the dishmachine will be reduced. Putting unscraped dishes into the machine affects its performance, so scraps should always be removed from ware before being loaded into a rack. Pre-rinsing and pre-soaking are good ideas, especially for silverware and casserole dishes.

Place cups and glasses upside-down in racks so they don't hold water during the cycle. The dishmachine sanitizes as well as cleans. To do this, ware must be properly prepared before being placed in the machine.

# OF WARE

WASHING A RACK To wash a rack, open the door completely and slide the rack into the unit. Close the door, ensure the "WASH/DELIME" switch is on "WASH," press the "Start" button, and the unit will start. After the cycle light turns off, the cycle is complete. When the flush light is on (steady, not flashing), tank water should be drained and refilled.

#### OPERATIONAL INSPECTION

Based on use, the strainer might become clogged with soil and debris as the workday progresses. Operators should regularly inspect the strainer to ensure it has not become clogged. If clogged, it will reduce the washing capability of the machine. Instruct operators to clean out the strainer at regular intervals or as required by workload.

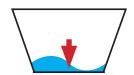

#### SHUTDOWN & 1. **CLEANING**

At the end of the workday, close the door. Flip the "ON/OFF" switch to the "OFF" position.

(UH30-FND Controls Shown.)

2. The drain pump will activate and empty the unit of water.

# SHUTDOWN & CLEANING

**SHUTDOWN &** 3. When draining stops, remove the strainer.

4. Remove soil and debris from the strainer and set to the side.

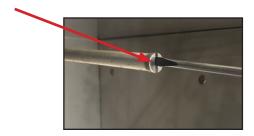

5. Unscrew the wash and rinse arms from their manifolds. Remove the end-caps and flush the arms with water. Use a brush to clean out the inside of the arms. If the nozzles appear to be clogged, use a toothpick to remove the obstruction.

6. Wipe the inside of the unit out, removing all soil and scraps.

7. Reassemble the wash/rinse arms.

# SHUTDOWN & 8. CLEANING

8. Replace the wash and rinse arms in the unit. The arms only need to be hand-tight; do not use tools to tighten them down.

9. Reinstall the strainer and close the door.

**DELIMING** Follow the steps below to delime the machine. The tank capacities of the machine can be found in the Specifications section of this manual.

1. Remove rinse arms and place in sink with deliming solution (UH30-FND only).

#### NOTICE

If this machine is equipped with an SPS and lime is becoming a frequent problem, the cartridge needs to be replaced. To order a replacement cartridge, call the manufacturer.

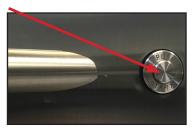

2. Flip the "ON/OFF" switch to the "ON" position.

3. Flip the "WASH/DELIME" switch to the "DELIME" position.

- 4. Add deliming solution per chemical supplier's instructions.
- 5. Close the door.
- 6. Push the "START" button.

7. Wait until cycle is complete and inspect the inside of the machine. If the machine is not delimed, run again.

**NOTICE** This equipment is not recommended for use with deionized water or other aggressive fluids. Use of deionized water or other aggressive fluids will result in corrosion and failure of materials and components. Use of deionized water or other aggressive fluids will void the manufacturer's warranty.

# CONTROL

**DETERGENT** Detergent usage and water hardness are two factors that greatly contribute to the machine's operating efficiency. Using the proper amount of detergent can become a source of substantial savings. A qualified water-treatment specialist can determine what is needed for maximum efficiency from the detergent.

- Hard water greatly affects the performance of the machine, causing the amount of detergent required for washing to increase. If the machine is installed in an area with hard water, the manufacturer recommends the installation of the Scaltrol Water Treatment system.
- Deposited solids from hard water can cause spotting that will not be removed with a drying agent. Treated water will reduce this occurence.
- Treated water might not be suitable for use in other areas of operation and it might be necessary to install a water treatment system for the water going to the machine only. Discuss this option with a qualified water treatment specialist.
- Properly train operators on how much detergent is to be used per cycle. Meet with a water treatment specialist and chemical supplier to discuss a complete training program for operators.
- Provide chemicals for proper operation and sanitization and require the installation of third-party chemical feeders to introduce these chemicals to the machine. Contact a chemical supplier with any questions.
- Water temperature is an important factor in ensuring the machine functions properly, and the machine's data plate details what the minimum temperatures must be for the incoming water supply, the wash tank, and the rinse tank. If minimum requirements are not met, it's possible that dishes will not be clean or sanitized.
- Instruct operators to observe the required temperatures and to report when they fall below the minimum allowed. A loss of temperature can indicate a larger problem.

## PREVENTATIVE MAINTENANCE

# **MAINTENANCE**

PREVENTATIVE The manufacturer highly recommends that only qualified service personnel perform any maintenance and repairs not specifically discussed in this manual.

WARNING! Unqualified personnel performing maintenance on the machine may void the warranty, lead to larger problems, or cause harm to the operator.

By following the operating and cleaning instructions in this manual, you should get the most efficient results from your machine. As a reminder, here are some steps to take to ensure that you are using the dishmachine the way it was designed to work:

CAUTION! Do NOT beat strainers to remove debris!

- 1. Ensure that the water temperatures match those listed on the machine data plate. There can be a variety of reasons why your water temperature could be too low.
- Ensure that all strainers are clean and securely in place before operating the machine. When cleaning out strainers, do NOT beat them on waste cans. Wipe out strainers with a rag and rinse under a faucet if necessary. Use a toothpick to dislodge any stubborn debris.
- Ensure that all wash and rinse arms are secure in the machine before operating.
- Remove as much soil from dishes by hand as possible before loading into racks.
- Do not overfill racks.
- Ensure that glasses are placed upside-down in the rack.
- 7. Ensure that all chemicals being injected into machine have been verified at the correct concentrations.
- 8. Clean out the machine at the end of every workday per the Shutdown and Cleaning section of this manual.
- 9. Follow all safety procedures, whether listed in this manual or put forth by local, state, or national codes/regulations.

## **TROUBLESHOOTING**

## **TROUBLESHOOTING**

**WARNING!** Inspection, testing, and repair of electrical equipment should only be performed by qualified service personnel. Certain procedures in this section require electrical tests or measurements while power is applied to the machine. Exercise extreme caution at all times. If test points are not easily accessible, disconnect power, attach test equipment, and reapply power to test. When replacing electrical parts, disconnect power at source circuit breaker.

OBSERVATION	DOSSIDI E CALISE	REMEDY
	POSSIBLE CAUSE	
Water overflow	1. Clogged drain.	Remove obstruction.
from bottom of door.	2. Machine not level.	2. Level machine or increase height to the front.
· · · · · · · · · · · · · · · · · · ·		Install pressure regulator or adjust if one is present.     Ensure flow meets data plate specification.
	4. Detergent foaming.	4. Reduce detergent quantity.
	5. Wash/rinse arm end-cap missing.	5. Replace.
Wash motor doesn't	1. Loose or broken wires.	Reconnect or replace wires in motor.
operate on 2. Defective "WASH/DELIME" switch. 2. Verify "WASH/DE		2. Verify "WASH/DELIME" switch triggers input on PLC. If not, check wiring/replace membrane.
	3. Defective motor starting relay.	3. Replace.
	4. Machine in FAULT mode and locked out.	4. Review fault screen for active faults.
No water comes through		
the arms when the "WASH/	1. Water not turned on.	1. Turn water on.
DELIME" switch is depressed.	2. Defective solenoid valve	2. Replace solenoid valve.
Little or no water coming through	1. Limed-up heads or piping.	1. Delime heads.
the wash/rinse assemblies.	2. Low water pressure.	Adjust pressure regulator (not supplied) or increase pipe size to machine.
Rinse water runs continuously	Defective plunger in solenoid valve.	1. Replace.
with breaker turned off.	2. Defective diaphragm in solenoid valve.	2. Replace diaphragm.

12	3	Tube Stiffener 05700-002-66-49	
13	2	Splice, Red Butt 05940-200-26-00	

#### UL30/UL30H VACUUM SWITCH INSTALL

Back of machine showing use of existing mounting hardware for installation of vacuum switch assembly.

Remove locknut on plumbing support bracket and mount switch box over existing stud. Reinstall bracket and route red and white tubes behind blue hose as shown.

Route gray cable down back and under the tub along inlet plumbing, remove wires from existing pressure switches, and connect to gray cable per instructions below.

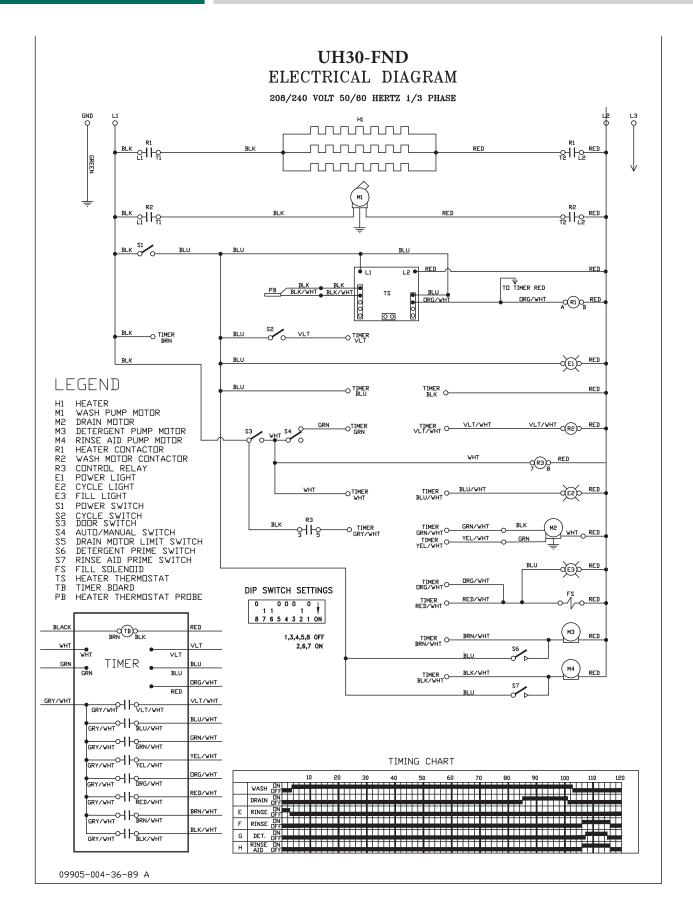

#### **Detergent Switch (Red Tube)**

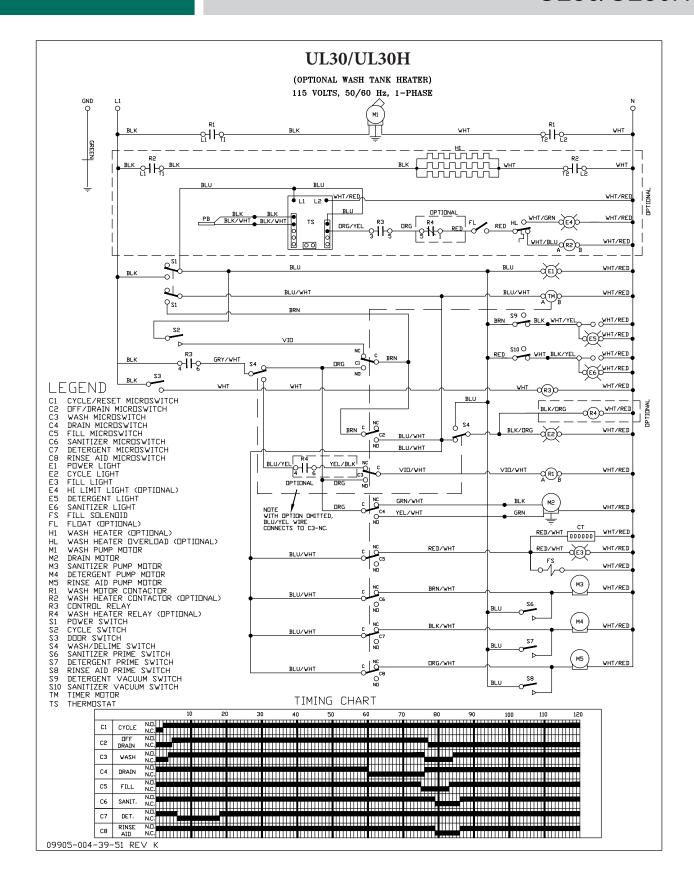

- 1. Connect black wire from gray cable to black/yellow wire from switch.
- 2. Connect brown wire from gray cable to blue wire from switch.

#### Sanitizer Switch (White Tube)

- Connect white wire from gray cable to white/yellow wire from switch.
- 2. Connect red wire from gray cable to blue wire from switch.

After cutting the existing red and white tube approximately 12" above the gray tube stiffener, insert the cut ends into the clear tubes as shown.
